

To Whom it May Concern,

Thank you so much for the taking the time to view my website. Throughout my education at the University of North Texas, I have studied various topics in IT such as system, network, and database administration, automation with Cron and scripting languages including Python and Bash, virtualization, configuration of Cisco servers, firewalls, switches, and VOIP, managing users and permissions on Windows and Ubuntu servers, and software development using numerous object oriented programming languages and web development frameworks. I am also currently studying for my CCNA exam which I plan on taking after my graduation from UNT. With the knowledge from my education, I have built the website you have used to find this cover letter.

In my past experience working with Child Protective Services, I learned so much about working as a team under immensely stressful situations and not giving up until the job is finished. In one instance, there was a child who was being successfully discharged from a children's home but was not allowed to return to her mother yet. The foster agency was not willing to work with us as we'd hoped so it became a team effort between myself, my supervisor, the foster care agency, and the foster family to ensure the child had a place to stay that night. It became a 13 hour work day, but I am proud to say that the child was placed into a great foster care home and I successfully closed the case in court four months later to return the child to her mother. I am proud of my efforts in this case and what we were able to achieve for this child as a team.

I look forward to hearing back from you and if you have any questions, feel free to reach out to me at any time.

Sincerely,

Brett Piatek
